Education

Thapar Institute of Engineering and Technology

Expected May 2027

Bachelor of Engineering in Electronics Instrumentation and Control

Patiala, Punjab

- **Relevant Coursework:** Data Structures and Algorithms (C++), Object Oriented Programming, Data Base Management System, Digital Electronics, Analog Electronics, Digital Signal Processing, Signals and System

Technical Skills

Languages: C, C++, Python, JavaScript, HTML, CSS

Frameworks: React.js, Django, Django REST Framework

Libraries: Streamlit, Pandas, NumPy, Matplotlib, TensorFlow, Scikit-learn

Cloud and Databases: AWS(S3, EC2, Lambda), SQLite, PostgreSQL, Redis

Developer Tools: Git, GitHub, VS Code, Postman

Projects

Peer Code | Django, DRF, React.js, PostgreSQL, Judge0 API - (Ongoing)

[Github](#)

- Developing a full-stack competitive coding platform using Django, Django REST Framework, React.js, PostgreSQL, and JWT Authentication with secure user authentication and problem management.
- Built real-time leaderboards that reflect submission results and rankings as contests progress, using WebSockets to keep all participants' views in sync without manual refresh.
- Designed contest infrastructure including private coding rooms, randomized problem allocation per room, and contest timers, with PostgreSQL schema supporting concurrent submission tracking across multiple active contests.

AI Resume-Job Matcher | Python, Gemini API, FAISS, pdfplumber, NumPy - July 2026

[Github](#)

- Built a RAG-based resume-job matcher: PDF text extraction → LLM-based structured data extraction → embedding-based semantic search using FAISS
- Designed and engineered prompts to reliably extract structured JSON (skills, experience, projects) from unstructured resume text via the Gemini API
- Implemented vector similarity search (cosine similarity via normalized inner product) to rank job postings against a candidate's resume, replacing keyword-based matching

Marketplace – E-Commerce Web App | Django, Python, SQLite, HTML, CSS, and Bootstrap - December 2025

[Github](#)

- Developed a full-stack marketplace web application using Django, Python, SQLite, HTML, CSS, and Bootstrap with secure user authentication and profile management.
- Implemented product listing and management features, allowing users to upload products with images, categorize listings, and manage inventory through a personalized dashboard.
- Built a one-to-one messaging system enabling buyers and sellers to communicate directly through product-specific conversations, improving user interaction within the platform.

Programming Handles

[LeetCode](#) • [GeeksforGeeks](#) • [Codechef](#)

Achievements

- Selected for the Forward Program 2026 by McKinsey and Company.
- Advanced to Round 1 of Google's "The Big Code" competition, ranking among the top 15,000 participants nationwide.
- Selected among the top 150 students in college for Round 2 of HackWithInfy by Infosys.
- Solved 300+ Data Structures and Algorithms problems on platforms such as LeetCode and GeeksforGeeks.
